THEOPRASTOS PROJECT

Quantifying the contribution of the emissions due to the mining activities of LCWM - PM10 concentrations from the current and planned activities into the sources and recipients.

The project is conducted by the:

- Laboratory of Atmospheric Pollution and Environmental Physics
- Technological Research Centre of Western Macedonia.

It is funded by the Lignite Centre of Western Macedonia /Greek Public Power Corporation

OUTLINE

- Method
- Measurements – Analysis
- Emission factors of PM10 per mining activity
- PM10 emissions per activity
- Total PM10 emissions due to the mining activities
- Dispersion - diffusion of the PM 10 emitted by the mines operated in Western Macedonia
- Next steps
